

Probe and Socket Competitor Cross-Reference

This Cross-Reference is divided into three sections, making it quick and easy to find the best match for a given probe.

The first section lists all available product series available from each manufacturer with a general description including the center spacing, stroke and if it is crossable to a QA product. The second section list all available point styles available from each manufacturer. The third section is an alphabetical listing of each possible product from each manufacturer, along with the QA equivalent.

The attached information is based on currently available data from test probe manufacturers. Of course, new products are often released, there are frequent changes to probe specifications and part numbers occasionally change. Some variations in tip geometry and other dimensions often apply. Therefore, it is always recommended that you consult with your QA Technology representative or call the factory directly to discuss your application and the proper replacement probe.
